

Answers:

1. **D. radio frequency amplifier**
2. **D. sensitivity, selectivity and stability**
3. **A. It has high-fidelity audio which can be understood even when the signal is somewhat weak**
4. **D. Single sideband suppressed carrier**
5. **B. Peak-reading, rms-reading**
6. **B. vertical, horizontal**
7. **A. Microphone**
8. **B. By installing a terminated circulator or ferrite isolator in the feed line to the transmitter and duplexer.**
9. **B. linear amplifier**
10. **A. BFO**
11. **B. FM and double sideband AM.**
12. **D. Intermodulation interference.**
13. **B. Cross-modulation interference.**
14. **C. The strongest signal received is the only demodulated signal.**
15. **C. Connect a capacitor between the B+ lead and ground.**
16. **A. A notch filter**
17. **B. power supply**
18. **B. Ratio**
19. **B. The ratio between the deviation of a frequency modulated signal and the modulating frequency.**
20. **C. Desensitizing.**
21. **C. cancel, filter.**
22. **B. A3F**
23. **D. radio frequency amplifier**
24. **B. The ratio of the maximum carrier frequency deviation to the highest audio modulating frequency.**
25. **D. The modulation index does not depend on the RF carrier frequency (the modulated frequency).**
