

Answers:

1. **A. A PL-259 connector**
2. **B. physical dimensions and relative positions of the conductors**
3. **C. braid and insulation around a central conductor**
4. **A. Between the coaxial cable and the antenna**
5. **A. velocity of energy on the line**
6. **C. It does not work well when tied down to metal objects, and you must use an impedance-matching device with your transceiver**
7. **A. Open-conductor ladder line**
8. **C. 600 ohm open-wire**
9. **B. Balanced to unbalanced**
10. **D. equal to the pure resistance which, if connected to the end of the line, will absorb all the power arriving along it**
11. **A. The ratio of the diameter of the inner conductor to the diameter of the braid**
12. **D. A center wire inside an insulating material which is covered by a metal sleeve or shield**
13. **B. by using a 4 to 1 balun**
14. **C. A transmission line**
15. **D. Two wires side-by-side held apart by insulating rods**
16. **A. A BNC connector**
17. **D. Feed line with one conductor connected to ground**
18. **D. A type-N connector**
19. **A. The distance between the centers of the conductors and the radius of the conductors**
20. **D. coaxial cable**
21. **B. It is weatherproof, and its impedance matches most amateur antennas**
22. **B. A balun**
23. **C. Coaxial cable**
24. **C. propagation delay**
25. **A. can be the same for different diameter line**

END
