

Answers:

1. **D. 2.1 dB**
2. **C. An antenna where some elements obtain their radio energy by induction or radiation from a driven element**
3. **C. 13 dB**
4. **D. 0.2**
5. **D. mostly to the East and West**
6. **B. one wavelength**
7. **D. Gain increases**
8. **B. The power radiated in the major radiation lobe compared to the power radiated in exactly the opposite direction**
9. **D. Gain increases**
10. **B. They compare favorably with a three element Yagi**
11. **D. The numerical ratio relating the radiated signal strength of an antenna to that of another antenna**
12. **D. One**
13. **D. It is greater**
14. **A. Optimize the lengths and spacing of the elements**
15. **A. Minimum radiation from the ends, maximum broadside**
16. **B. Use larger diameter elements**
17. **C. It goes out equally well in all horizontal directions**
18. **B. A 5/8-wavelength antenna has more gain**
19. **A. It increases**
20. **A. Minimum radiation from the ends, maximum broadside**
21. **D. 50 ohms coaxial cable**
22. **B. the ratio of the maximum forward power in the major lobe to the maximum backward power radiation**
23. **A. Bandwidth**
24. **D. 50 ohms coaxial cable**
25. **D. The numerical ratio relating the radiated signal strength of an antenna to that of another antenna**
